04-Configure AWS CLI

https://levelup.gitconnected.com/install-and-configure-aws-cli-for-deployment-c9148a10902f

Steps:

1. Create an IAM user with admin permission
2. Create security credentials and download it
3. Configure AWS Credentials in command line with `aws configure`

```
[user@localhost]$ aws configure
AWS Access Key ID: **********
AWS Secret Access Key: **********
Default region name: us-east-1
Default output format [None]:json
```

4. Verify if we are able to list S3 buckets

`aws s3 ls`

PS: On Linux and Mac OS, AWS credentials are stored in `~/.aws`

On Windows, AWS credentials are stored in `C:\Users\User\user_name\.aws`. You must enable hidden files first on Windows
